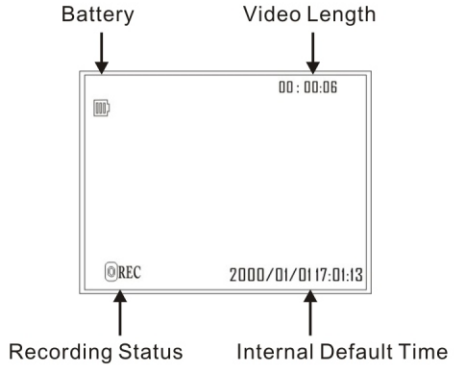
Method of Operation

Turn on

- Press the button until the device is turned on. Firmware version will be display on the screen, then it will start recording.
- After recording is finished, the file will be saved in Micro SD card automatically. Data is saved using CDVR system. Contents are saved and file is saved and named under "date & time".
  When the capacity of Micro SD card is below 100M, recurring record signal will appear on the screen; when the capacity is below 50M, the device will delete the earliest file and start recording again.
- If Micro SD card is not inserted in the device when it is turned on, "Insert SD Card" message will be shown on the screen.
- If Camera sensor is not installed on the device, "Please Check Sensor" message will be shown on the screen, and then the device will shut off automatically.

Display Area



Turn Off

- After user released the button, the system will store the files and turn off automatically within 3 seconds.

Date and Time Setting

- Press and Hold Up button and press the button simultaneously, the device will enter into the Date Setting menu.
- User may release both button and start date and time setting. Use the Up / Down button to change the date and time settings. There are five items in the following order: Year, Month, Date, Hour, and Minute. If user does not press Up / Down button within 3 seconds, the system will move on to the next item.
- After user sets the date and time, the device will turn off automatically.
- Users may set the date and time even though camera sensor is not installed on the device.
